

Head of Applied AI Lab — Financial Services

About the role

We are hiring a Head of Applied AI Lab to own applied AI strategy and lab buildout across our regulated financial-services business. You will lead a team of staff-level builders shipping production GenAI evaluation, internal copilots, and customer-facing AI features, with direct exposure to executive stakeholders.

What you'll own

Applied AI strategy for the financial-services portfolio.
Lab buildout: hiring, technical direction, and operating model.
Production GenAI evaluation: offline and online.
Executive stakeholder alignment across product, risk, and legal.
Regulated AI delivery: audit trails, model risk, controls.

What we're looking for

Someone who has actually built and led applied AI teams in banking or financial services — not someone who has only advised on AI strategy from a consulting seat.
Hands-on technical depth in GenAI evaluation, retrieval, and production LLM systems.
Comfortable leading senior individual contributors and partnering with executive stakeholders in regulated contexts.

Patterns that aren't a fit

Pure research backgrounds without production AI delivery.
Pure advisory backgrounds without team leadership outcomes.
Engineers without regulated-industry exposure (we need someone who has navigated model risk + audit, not someone learning it).

Compensation and location

Competitive base, equity, and a meaningful bonus tied to delivery outcomes. Hybrid based in New York City; up to two remote days per week.
